

# INCREASE VISIBILITY

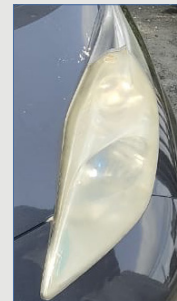

## BRITE HEADLIGHT RESTORATION - #02911

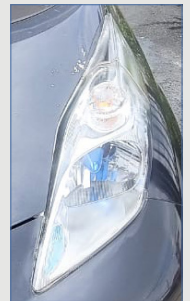

The intense UV rays from the sun along with rain, airborne contaminants, and road grime all eat away at the clear coat on polycarbonate headlight lenses. This leaves them looking oxidized and yellowed while limiting nighttime visibility for drivers and other vehicles on the road.

The most effective way to repair this damage is to sand or polish the headlight surface, which will remove the yellowed and oxidized coating from the lenses. BRITE Headlight Coating will bring back the original shine and create a barrier that protects headlights from harmful conditions and contaminants for up to 12 months!

BEFORE

AFTER

## PRODUCT BENEFITS:

- Enhance vehicle appearance
- Quick-Dry, easy to spray coating
- Brighten yellow or faded headlights
- Maintain functionality & performance
