

# HEADLIGHT RESTORATION SERVICE

## HEADLIGHTS ENSURE YOUR SAFETY WHILE DRIVING!

The intense UV rays from the sun along with rain, airborne contaminants, and road grime all eat away at the clear coat on polycarbonate headlight lenses. This leaves them looking oxidized and yellowed while limiting nighttime visibility for drivers and other vehicles on the road. While the impact on a vehicle's value varies, yellow and oxidized headlights can diminish its appearance.

The only way to repair this damage is to sand or polish the headlight surface, which will remove the yellowed and oxidized coating from the lenses. Then apply BRITE Headlight Coating, bringing back the original shine and creating a barrier that protects headlights from harmful conditions and contaminants for up to 12 months!

### **BENEFITS :**

- Increase visibility
- Enhance vehicle appearance
- Quick-Dry, easy to spray coating
- Brighten yellow or faded headlights
- Maintain functionality & performance
